WEATHER OF CONCERN

Weather of Concern

- Breezy offshore flow along with above normal temperatures and low relative humidity will result in elevated fire danger for Southern California.

Active Weather Warnings, Watches and Advisories by County:

- <https://alerts-v2.weather.gov/counties/CA>

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

Strong high pressure over the Pacific Northwest will remain in place through Thursday. N-NE/Offshore winds will gust to 20-30 mph and locally higher from the lower western Sierra slopes to the coast, with relative humidity (RH) dropping to 8-18%. RH will only recover to 25-35% in these areas tonight as well. This will lead to a marginal "High Risk" event of Significant Fire Potential for the Sacramento Valley and Surrounding Foothills, the Mid Coast and the Bay Area Santa Cruz-Diablo PSAs today. The high will move overhead late Wednesday and Thursday. Other than the afternoon sea breeze winds will be fairly light late Wednesday and Thursday. Temperatures will be 5-10 degrees above normal.

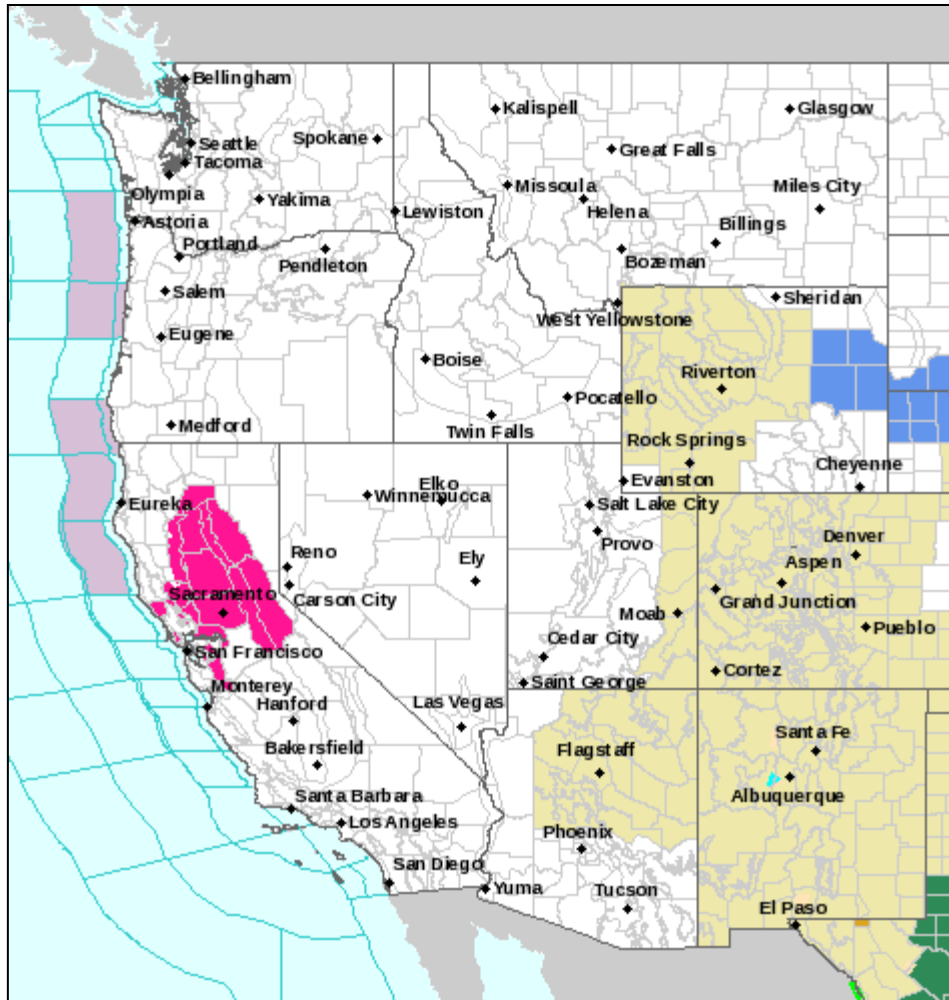

On Friday a weak cold front will sweep across our northern areas. Light rain is possible in Del Norte and Siskiyou Counties. The main effect will be an increase in clouds and SW-NW winds. Afternoon SW-W winds will gust to 25-35 mph along and east of the Cascade-Sierra crest Friday afternoon. This weekend will be dry and warm with another round of N-NE/Offshore winds, but winds are not expected to be strong enough to reach High Risk criteria.

SOUTHERN CALIFORNIA

A low pressure area which has been stationary over the Southwest will lift out of the area, bringing a slow end to the offshore winds. Early this morning, light offshore winds of 10-20 mph are occurring, mainly over northern Los Angeles County. In the vicinity of the Canyon Fire, Fremont Canyon currently has northeast winds in the 8-12 mph range with only light winds reported elsewhere in northern Orange County. However, RH recovery was poor over these area with readings only in the teens as of 6 am. Expect northeast winds to remain in the 10-20 mph range over Northern Los Angeles and Orange County this morning before weakening this afternoon. Temperatures today will be a bit cooler this afternoon with most coastal and valley areas remaining in the 80s. Thursday and Friday, a ridge will rebuild over the area and Southern California will likely see valley readings return to the lower to mid 90s. Most long range model guidance depict another trough entering the Pacific Northwest over the weekend. This may bring cooler, onshore flow back into the area. By Sunday and Monday, temperatures may return to near or slightly below normal readings with night through morning low clouds. It may be windy along the central coast and the Antelope Valley each afternoon next week. No further offshore winds are expected the next 7 days.
